

Interventions to Promote Medication Adherence in Patients with MS

| | |
|---------------------------|---|
| Forgetfulness | Simplified dosing regimen Frequent follow-up Maximize support network Telephone counselling |
| Adverse events | Assess injection-site reactions Aggressively assess and treat Change treatment if interventions exhausted Frequent follow-up |
| Treatment fatigue | Discuss with patient Enlist family/other support Change treatment if needed Motivational interviewing |
| Resources: family support | National Family Caregivers National Caregiver's Library |
| Cost | Assist with resource identification Appeal to insurance |
